

ABSTRACT

There are provided a device for displaying link information and a method for displaying the same which display the image of an actual object superimposed with the label of link information so as to easily obtain information on the actual object and to display a moving link. An image input part obtains the image signal of an actual object. A link information receiving part receives link information transmitted by a transmitter. A link contents detection part detects the link contents. An attribute information detection part detects the attribute. A link position detection part detects the link position. The image signal obtained by a synthesizing part is superimposed with the link contents in the display coordinate of a link label calculated by a coordinate conversion part in accordance with the attribute information. A display part displays the image signal synthesized. The user uses a pointing device to easily obtain the link information on the actual object in accordance with the link label.
